value (COUNT VALUE M) of the half cycle of the reference clock; and a multiple clock counter (113, 114) which, in case the value (COUNT VALUE M/N) obtained by dividing the count value of the half cycle of the reference clock by a multiplication factor (103) is defined as a multiple count value, inverts the output of the multiple clock output (102) each time it counts the multiple count value by the output clock of the ring oscillator; and being configured in a clock multiplier circuit which outputs a multiple clock having a frequency of the multiplication factor externally given with regard to the reference clock.
